

Project Design Phase

Problem – Solution Fit Template

Date	09 July 2026
Project Name	CUSTOMER REGISTRY
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

1. CUSTOMER SEGMENT(S) CS <i>Who is your customer?</i> Customers submitting support requests and complaints. Support agents handling and resolving customer requests. Admins overseeing operations, workflows, and team reporting.	6. CUSTOMER CONSTRAINTS CC <i>What constraints prevent your customers from taking action or limit their choices of solutions?</i> Customers: Limited time to explain the same issue repeatedly to different agents. Agents: Juggling multiple communication channels with no shared context. Internal: No visibility into internal support processes or complaint history.	5. AVAILABLE SOLUTIONS AS <i>Which solutions are available to customers when they face the problem?</i> • Generic email support inboxes. • Spreadsheet-based ticket lists. • Phone-only support lines. • Basic CRM software with no dedicated support workflow or role-based access. Explore AS, differentiate
2. JOBS-TO-BE-DONE / PROBLEMS J&P <i>Which jobs-to-be-done or problems do you address for your customers?</i> Customers: Need to get complaints resolved quickly and track the status of their requests. Agents: Need clear complaint context instead of digging through scattered notes across channels. Admins: Need visibility into team workload, complaint escalation, and agent performance.	9. PROBLEM ROOT CAUSE RC <i>What is the real reason that this problem exists?</i> There is no centralized system to store complaint data, track requests, and route them to the right agent automatically. As a result, information gets lost, responses are delayed, and service quality is inconsistent.	7. BEHAVIOUR BE <i>What does your customer do to address the problem?</i> Customers call or email repeatedly to ask for status updates. Agents spend excess time re-reading old messages within a complaint thread to reconstruct context. Focus on J&P, tap into BE, understand RC
3. TRIGGERS TR A product or service issue occurs for a customer. A customer experiences the same complaint again. A support request misses its resolution time (SLA breach). An agent is reassigned mid-case and needs context.	4. EMOTIONS: BEFORE / AFTER EM Before: Frustrated, anxious, and unheard (when facing the problem). After: Relieved, confident, and in control (after using the solution).	10. YOUR SOLUTION SL A Customer Registry web application (built on the MERN stack) that centralizes complaint submission, real-time status tracking, agent assignment, and admin reporting — with a dedicated chat thread per complaint so agents have full context on that specific case.
		8. CHANNELS OF BEHAVIOUR CH 8.1 Online: Email, social media direct messages (DMs), and in-app chat. 8.2 Offline: Phone calls. Extract online & offline CH of BE
